XOLACE INC

Public Presence Review

Issues, risks and recommended fixes — organized by priority for team discussion

Scope: xolaceinc.com (Home, About, Manifesto, Privacy, Terms, Support, Press), ambassador.xolaceinc.com, Google Play listing, Whitepaper v1.9

Date: 27 September 2026

Prepared for: Xolace founding team meeting

Note: *The App Store listing could not be loaded during review and was not assessed. Legal points are flagged for review by a qualified Ghanaian lawyer; this document is not legal advice.*

1. Executive Summary

Xolace's product thinking is strong. The manifesto is the best writing on the site, and the core insight- that people struggle with articulation, not expression- is real and defensible.

However, the public surface contradicts itself on the things a mental health product cannot afford to get wrong: privacy, safety, legal responsibility, and what the product actually is. A careful journalist, university partner, or app store reviewer could expose these gaps quickly.

The three things to fix first:

- **Safety:** crisis resources point to a US number, and the ambassador simulator teaches an under-escalating crisis response.
- **Trust:** privacy claims on the homepage are contradicted by the privacy policy and Play listing; the rating shown is inflated.
- **Legal:** the Terms name no legal entity or governing law, and allow 13-year-olds into private chats with strangers.

Priority overview

Priority	Meaning	Issues	Timeline – If we are to tackle these issues.
P0 · CRITICAL	User safety, trust, or legal exposure right now	**6**	Fix this week
P1 · HIGH	Legal, privacy and product-clarity gaps	**9**	Fix this month
P2 · MEDIUM	Website quality, SEO and polish	**7**	Fix this quarter
P3 · STRATEGIC	Long-term credibility and growth	**3**	Ongoing, next 3–6 months

How to read this document

- **P0 Critical:** user safety, trust, or legal exposure right now. Fix this week.
- **P1 High:** legal, privacy, and product-clarity gaps. Fix this month.
- **P2 Medium:** website quality, SEO, and polish. Fix this quarter.
- **P3 Strategic:** long-term credibility and growth. Plan over 3–6 months.

Each issue card shows what was found, why it matters, the recommended solution, a suggested owner by role, and a rough effort estimate. Owners are suggestions for the meeting to confirm.

2. Action Tracker (Meeting View)

One-page view of every issue for the meeting. Confirm owners and deadlines, then track status here.

P3-3	Unclear primary market	Founding team	☐ Open

3. P0 — Critical (Fix This Week)

These issues put users at risk or expose Xolace to immediate trust or legal damage. Most are low effort and can be fixed within days.

P0-1 Privacy promises contradict the privacy policy and store listing	
Area	Privacy & Trust
What we found	The homepage says no human at Xolace reviews what users write, names are never attached, and "you are not a profile". The manifesto says "no sign-up". But the privacy policy collects Google account IDs (via Clerk, Apple/Google sign-in), the Play listing describes Xolacer profiles with ratings and one-to-one chats, Sentry records session replays in production, and PostHog tracks interaction patterns.
Why it matters	A single journalist, reviewer or user comparing pages can accuse Xolace of misleading users about privacy. For a mental health app, this is the fastest way to lose trust permanently.
Solution	• Rewrite every privacy claim so it is precisely true (e.g. "Your reflections are never linked to your name in anything shared. Peer chats are read only by the Xolacer you choose."). • Replace "no sign-up" with an accurate description of sign-in. • Turn off Sentry session replay on all reflection, vent and chat screens. • Keep one master list of privacy claims and check every page against it before publishing.
Suggested owner	CEO + CTO **Effort:** Low–Medium

P0-2 Crisis resources are US-only for a Ghanaian product	
Area	Safety
What we found	Every footer and the Support page list only 988 (US Suicide & Crisis Lifeline). Xolace is based in Koforidua and its users and ambassadors are in Ghana. The manifesto also promises not to hand people "a cold hotline number", which is exactly what the footer does.
Why it matters	A distressed user in Ghana is given a number that will not work. This is a direct user-safety failure and a reputational risk if ever highlighted.
Solution	• Add verified Ghana resources first: national emergency 112 and the current Mental Health Authority lines (confirm numbers before publishing). • Add a short international list below it. • In-app, show crisis resources based on the user's region. • Align the footer wording with the manifesto's "warmth and context" promise.
Suggested owner	COO **Effort:** Low

P0-3 Contact emails spread across three domains	
Area	Operations
What we found	The footer lists support@xolace.com, the privacy policy uses privacy@xolace.app, while the Play listing and review replies use support@xolaceinc.com, and other contacts use @xolaceinc.com.
Why it matters	If xolace.com or xolace.app are not owned by Xolace, users' support and privacy requests (possibly containing sensitive details) go to a stranger. Also looks disorganised.
Solution	• Verify today whether Xolace owns xolace.com and xolace.app. • Standardise every address on @xolaceinc.com (support@, privacy@, legal@, press@, hello@). • Update the website, privacy policy, terms and both store listings in one pass.
Suggested owner	CTO **Effort:** Low

P0-4 Inflated rating and weak testimonials	
Area	Credibility
What we found	The homepage claims a 4.9 rating across App Store and Google Play. Google Play shows 4.8 from 10 reviews and 100+ downloads. The section says "Every word here is real" above testimonials that read as broken ("Xolace is friend. It's you shows you…", "Emotional Clarity emotions instead of just feeling 'off.'"). Some testimonial names may overlap with ambassadors.
Why it matters	Overstated social proof is easy to check and damages credibility with investors, partners and app store reviewers. Undisclosed testimonials from team or ambassadors breach Xolace's own ambassador code.
Solution	• Show the real, current rating and review count, or remove the number. • Remove garbled testimonials; keep only clear, verifiable reviews and link to the store pages. • Disclose any testimonial written by an ambassador, team member or friend.
Suggested owner	CMO **Effort:** Low

P0-5 Ambassador "Peer Crisis & Protocol Simulator" teaches an unsafe response	
Area	Safety
What we found	The scenario describes a student with four days without sleep, fear of family rejection and "I can't keep breathing like this". The "correct" answer is to breathe together and find a next step, with no escalation to professional or emergency help, which contradicts the ambassador rule to always point people to real support. The page calls training "rigorous" while the steps describe "short onboarding".

Why it matters	Publicly teaching peers an under-escalating response to a potential crisis is a serious safety and liability risk.
Solution	• Take the simulator down until it is reviewed. • Have a licensed clinician rewrite the scenario so the correct answer includes escalation to professional or emergency support. • Describe training honestly (length, content, who delivers it).
Suggested owner	COO + Ambassador lead **Effort:** Low

P0-6 Google Play listing says "Billed through your Apple account"	
Area	App Store
What we found	The Xolace+ section of the Google Play description was copied from the iOS listing and refers to Apple billing.
Why it matters	Confuses paying users and can trigger a store policy flag for inaccurate subscription disclosure.
Solution	• Replace with Google Play billing wording (billed through Google Play, cancel in Play subscriptions). • Keep separate, reviewed copies of the iOS and Android descriptions.
Suggested owner	CMO **Effort:** Very low

4. P1 — High (Fix This Month)

Legal, privacy and product-clarity gaps that partners, investors and regulators will notice. These need decisions from the founding team.

P1-1 Terms have no legal entity or governing law	
Area	Legal
What we found	The Terms say the governing jurisdiction will be specified "as Xolace establishes its legal entity", yet Google Play lists XOLACEINC LTD with a Ghana address. The Terms use US-style binding arbitration and jury/class-action waivers. The site brands itself "Xolace Inc.", which signals a US corporation and does not match the registered Ltd.
Why it matters	Unenforceable or confusing terms; partners (universities, NGOs, investors) will flag this immediately.
Solution	• Name XOLACEINC LTD as the operator in the Terms and privacy policy. • Set Ghana law as governing law and remove the US arbitration boilerplate. • Align the copyright line and branding with the registered name. • Book one hour with a Ghanaian lawyer to review both documents.
Suggested owner	CEO **Effort:** Medium

P1-2 No Ghana data protection compliance stated	
Area	Legal / Privacy
What we found	The privacy policy does not mention the Data Protection Act, 2012 (Act 843), registration with the Data Protection Commission, or name a data controller.
Why it matters	Regulatory exposure, and a credibility gap when handling sensitive emotional data.
Solution	• Confirm registration with the Data Protection Commission (register if not done). • Add a section naming the data controller, Act 843 and user rights under it.
Suggested owner	CEO + COO **Effort:** Medium

P1-3 13-year-olds can access private chats with strangers	
Area	Safeguarding
What we found	The Terms allow users from age 13, the Play rating is 12+, and the app offers private one-to-one text chats with peer listeners (Xolacers).
Why it matters	Serious safeguarding exposure and a common reason for apps to be removed from stores.
Solution	• Make Xolacer chat 18+ with age gating, or raise the minimum age for the whole app to 16+ or 18+. • Publish moderation, supervision and escalation rules for Xolacers.

Suggested owner	CEO + CTO **Effort:** Medium

P1-4 Session quotes used as marketing without marketing consent	
Area	Privacy
What we found	The homepage shows real session quotes (including grief) labelled "shared anonymously, with permission". Permission to share an Echo with other users is not permission to appear in marketing, and the privacy policy does not cover marketing use.
Why it matters	Consent breach involving highly personal content.
Solution	• Add a separate, explicit opt-in for marketing use, or replace with clearly labelled illustrative examples. • Update the privacy policy to cover this use if kept.
Suggested owner	CMO + CTO **Effort:** Low

P1-5 The product is described five different ways	
Area	Product clarity
What we found	Homepage: Mirror, Echo, Safety. Press kit: Mirror, Vent, Glimpses (short videos, which exist nowhere else). Play: Mirror, Kindling, Vessa, Xolacers, Xolace+. Whitepaper: Mirror, Venting, Echo, Trusted Bridge, Xolacers, Xolace Plus, Campers. The website does not mention Xolacers, Vessa, Kindling or Xolace+ at all, and says "not a social platform" while the app has peer chat with profiles and ratings.
Why it matters	Confuses users, press and partners; the newest features are invisible on the main website.
Solution	• Write one canonical feature glossary (names, one-line descriptions). • Update the homepage, press kit, both store listings and the whitepaper in the same week. • Remove Glimpses from the press copy unless it exists.
Suggested owner	CMO + CTO **Effort:** Medium

P1-6 Xolace+ pricing and free-tier limits are hidden	
Area	Pricing
What we found	The site says Xolace is free. The Terms say payment applies only "if applicable". Xolace+ is live, and the whitepaper says it raises session, venting and Xolacer limits, meaning free users hit limits the website never mentions.
Why it matters	Users feel misled when they hit limits; subscription disclosure issues.

Solution	• Add a clear Free vs Xolace+ section to the website. • Update the Terms to describe the live subscription.
Suggested owner	CMO **Effort:** Low

P1-7 Voice processing not disclosed	
Area	Privacy
What we found	The press kit says Vent is ephemeral and "nothing stored". The privacy policy never mentions voice recordings or who handles speech-to-text; ElevenLabs is listed for audio generation only.
Why it matters	Undisclosed processing of highly sensitive audio.
Solution	• Name the speech-to-text provider and state exactly what is stored and for how long.
Suggested owner	CTO **Effort:** Low

P1-8 Data-safety declarations disagree	
Area	Privacy
What we found	Google Play Data Safety says no data is shared with third parties and encryption is in transit only. The website claims encryption in transit and at rest. The policy says data is used to "improve AI models" but not to train third-party models, without saying whose models.
Why it matters	Store policy flags and user distrust.
Solution	• Reconcile the website, privacy policy and both store data declarations so they say the same thing. • State plainly whether Xolace trains any models of its own on user data.
Suggested owner	CTO **Effort:** Low

P1-9 No public Safety page for the riskiest feature	
Area	Safety
What we found	Xolacer peer chat is the highest-risk feature, but the website has no page explaining vetting, training, supervision, escalation, reporting or age policy.
Why it matters	Partners and parents cannot assess safety; weak position if an incident occurs.
Solution	• Publish a Safety page: Xolacer vetting and training, supervision, escalation paths, reporting/blocking, age policy, and what happens when risk is detected.
Suggested owner	COO **Effort:** Medium

5. P2 — Medium (Fix This Quarter)

Website quality, SEO and polish. Individually small, together they shape how professional Xolace looks.

P2-1 Broken and stale pages	
Area	Website
What we found	/faq returns a 404 while the Support page links to it. Support still asks "How do I join the waitlist?" although the app is live. Homepage FAQ answers do not appear in the page content, suggesting they are client-rendered and not indexable.
Why it matters	Looks unmaintained; hurts SEO.
Solution	• Build /faq or remove the link. • Remove the waitlist question. • Server-render FAQ answers.
Suggested owner	CTO **Effort:** Low

P2-2 Weak page titles and outdated metadata	
Area	SEO
What we found	The homepage title is "Emotional Infrastructure" with no brand name. Meta keywords on every page are left over from the old social platform ("Social, Platform, Fostering, Engagement, Communities").
Why it matters	Poor search visibility; positioning mismatch.
Solution	• Retitle the homepage, e.g. "Xolace — Find words for what you feel". • Write unique meta descriptions per page and drop the old keywords.
Suggested owner	CTO + CMO **Effort:** Very low

P2-3 Visible amateur details	
Area	Brand polish
What we found	Mascot image filenames start with "ChatGPT_Image_Oct_20__2025…", the Flux mascot is never introduced, there is a "/trsut-section/" folder typo and an "amabassadors" storage typo, and the CTO has an "E" placeholder instead of a photo (the press kit lists only three "on-record" co-founders).
Why it matters	Undercuts professionalism; invites "AI-generated" criticism; the missing CTO looks like a departure.
Solution	• Rename asset files and fix typos. • Introduce Flux on the site or remove it. • Add the CTO photo and include all four co-founders in the press kit.

Suggested owner	CTO + CMO **Effort:** Low

P2-4 Copy reads as AI-written and repetitive	
Area	Copy
What we found	Heavy use of "Not X. Not Y. Not Z." triplets, "That's it. That's the whole thing.", and "sitting on your chest" repeated across the homepage, About, manifesto, whitepaper and Play listing. "Your first session takes 3 minutes" conflicts with "3–8 minutes".
Why it matters	For a brand promising help that is "not simulated", machine-sounding copy undercuts authenticity.
Solution	• Do one human rewrite pass: cut half the negations and vary the imagery. • Keep one consistent session-length claim.
Suggested owner	CMO **Effort:** Medium

P2-5 Navigation, links and hosting	
Area	Website
What we found	Navigation has only About and Manifesto (no Safety, Pricing, Xolacers or FAQ). Social links carry tracking parameters (utm_source=qr&igsh=…, _r=1&_t=…). The TikTok handle (@talk.with.xolace) does not match the brand. The whitepaper is hosted on github.io. The App Store link uses the Ghana storefront.
Why it matters	Harder to find key information; less professional.
Solution	• Add Safety, Pricing and FAQ to navigation. • Clean social URLs; align handles where possible. • Host the whitepaper on xolaceinc.com. • Use a region-neutral App Store link.
Suggested owner	CTO **Effort:** Low

P2-6 Ambassador site inconsistencies	
Area	Ambassadors
What we found	The same page says "9+ ambassadors" and "10+ Active Ambassadors". "100+ lives impacted" is unverifiable. The canonical URL points to xolaceinc.com/ambassadors, which likely does not exist.
Why it matters	Contradictory numbers weaken credibility; SEO misdirection.
Solution	• Use one live count, define "lives impacted" or remove it. • Fix the canonical URL.

Suggested owner	Ambassador lead + CTO **Effort:** Very low

P2-7 Whitepaper sourcing and substance	
Area	Whitepaper
What we found	Broken footnote formatting ("[3 Afriyie", "[8 Seibel"); footnotes 8–9 are never referenced. Alexithymia is cited to WebMD; the emotional-granularity claim is uncited. Airbnb/Amazon comparisons read as grandiose at 100+ downloads. No traction, outcome or safety-protocol data.
Why it matters	Investors and universities judge rigour from the whitepaper.
Solution	• Fix footnotes; cite peer-reviewed sources (e.g. Taylor & Bagby on alexithymia, Barrett on emotional granularity). • Tone down the comparisons. • Add traction, early outcome and safety-protocol sections in v2.0.
Suggested owner	CEO **Effort:** Medium

6. P3 — Strategic (Next 3–6 Months)

Longer-term moves that turn Xolace's vision into evidence and credibility.

P3-1 No clinical advisor	
Area	Credibility
What we found	Nowhere on the site, whitepaper or ambassador programme is a licensed mental health professional named.
Why it matters	The biggest credibility gap for a mental health product; limits partnerships.
Solution	• Recruit at least one named, licensed Ghanaian clinician or psychologist as advisor. • Feature them on the About page, Safety page and whitepaper, and have them review crisis content and Xolacer training.
Suggested owner	CEO **Effort:** Medium

P3-2 Rhetoric outruns evidence	
Area	Evidence
What we found	The brand speaks as "emotional infrastructure" while public traction is about 100+ downloads and 10 reviews.
Why it matters	Claims feel hollow to investors and partners.
Solution	• Publish one honest metric (e.g. % of reflections marked "yes, that's it", median session length). • Run a pilot with a university counselling unit (starting with KTU) and publish the results.
Suggested owner	CEO + CTO **Effort:** High

P3-3 Unclear primary market	
Area	Market
What we found	The company is Ghanaian, but legal copy, crisis resources and billing are US-flavoured.
Why it matters	Serves neither market well.
Solution	• Decide the primary market. If Ghana/Africa: local crisis resources, Act 843 compliance, consider Twi/pidgin support, and a Mobile Money payment path for Xolace+.
Suggested owner	Founding team **Effort:** High

7. Decisions Needed in the Meeting

1. Confirm owners and deadlines for every P0 item.
2. Minimum age: raise the app to 16+/18+, or restrict Xolacer chat to 18+?
3. Primary market: Ghana/Africa first, or global? This drives legal, crisis resources and payments.
4. Canonical feature names: agree the glossary (Mirror, Echo, Vent, Vessa, Kindling, Xolacers, Xolace+, Trusted Bridge; drop Glimpses?).
5. Session quotes on the homepage: collect marketing consent, or replace with illustrative examples?
6. Clinical advisor: who approaches candidates, and by when?
7. Legal review: who books the Ghanaian lawyer for the Terms and privacy policy?

8. Suggested Timeline

When	What
Week 1	All P0 items: verify email domains, Ghana crisis resources, fix rating claim, remove broken testimonials, take down simulator, fix Play billing text.
Weeks 2–4	P1 items: rewrite Terms and privacy policy (entity, Ghana law, Act 843, age, subscription, voice), feature glossary, homepage update with Xolacers/Vessa/Xolace+, Pricing and Safety pages, marketing consent.
Month 2–3	P2 items: FAQ page, SEO titles and metadata, asset clean-up, CTO photo, human copy rewrite, navigation, whitepaper v2.0.
Months 3–6	P3 items: recruit clinical advisor, university pilot with published results, market decision and localisation (Mobile Money, language).
